VIKASH KUMAR

DevOps Engineer | Kubernetes, AWS & CI/CD Automation

Email: vikashkumar07844@gmail.com | Phone: 8445580441 | GitHub: github.com/vikashkumar0712 | LinkedIn: linkedin.com/in/mrvikash07

PROFESSIONAL SUMMARY

AWS Certified Solutions Architect – Associate with 3.5+ years building and operating cloud-native infrastructure on AWS, including national-scale government digital infrastructure. Skilled in Kubernetes (EKS), Terraform, Jenkins, ArgoCD, and Helm, with hands-on expertise in CI/CD automation, production support, and infrastructure cost optimization.

CAREER HIGHLIGHTS

- **National-scale platform:** DevOps engineer for UPYOG, India's national urban governance platform — live across 32 States/UTs, 3,300+ ULBs; recognized as a Digital Public Good
- **46%** reduction in AWS infrastructure costs through cloud resource optimization
- **60–70%** reduction in deployment time through CI/CD automation across two organizations
- **Zero-downtime migration** of 8 production applications from EC2 to EKS (Helm, ArgoCD, Terraform)

SKILLS

- **Cloud:** AWS (EKS, EC2, IAM, S3, CloudWatch)
- **Containers: Kubernetes**, Docker, Helm
- **CI/CD:** Jenkins (JCasC), GitHub Actions, ArgoCD
- **IaC:** Terraform, CloudFormation
- **Monitoring:** Prometheus, Grafana, Loki, ELK Stack
- **Languages / Tools:** Bash, Python, Go (Basic), Linux, Git
- **Databases:** PostgreSQL, MongoDB, MySQL

WORK EXPERIENCE

DevOps Engineer — National Institute of Urban Affairs (NIUA), New Delhi *Apr 2026 – Present*

- Architected Jenkins CI/CD on EKS using **JCasC (Configuration-as-Code) + Helm**, running builds as dynamic **Kubernetes** pod agents with multi-environment deployment via a custom Go-based deployer driven by environment-specific values.yaml — eliminating manual per-environment configuration.
- Automated webhook-triggered CI/CD for **UPYOG's** 100+ microservice monorepo, cutting the build-to-deploy cycle from ~25 minutes (manual job trigger + manual image lookup + manual deploy, no alerting) to 10 minutes fully automated — a 60% time reduction plus full elimination of manual dev effort — while adding deployment alerting; reduced router job execution to 2–4 seconds by replacing git checkout with GitHub webhook payloads + Contents API.
- Resolved 5–6 production incidents/month across multi-state and internal environments — **PVCs, storage, node health, scheduling, Helm deployment failures** — performing RCA with development teams to prevent recurrence.

Associate DevOps Engineer — Dhwani Rural Information System, Gurgaon *Nov 2023 – Apr 2026*

- Migrated 8 production applications (mGrant platform) from EC2 to EKS with zero downtime using **Helm, ArgoCD, Terraform and Jenkins** — cut deployment time from 2–4 hours to 10–15 minutes and staging AWS costs by 46%.
- Implemented **Prometheus/Grafana** monitoring across multi-tenant, namespace-isolated environments (ICICI Foundation, Sattva, TRIF), reducing MTTR from 30–60 minutes to 5–10 minutes.
- Designed a multi-tenant Helm repo structure — **ApplicationSet with list generator, ALB ingress (ACM/WAF)**, topology spread constraints, and PodDisruptionBudgets — for scalable, isolated client delivery.
- Recipient, Dhwani GEM Award for engineering impact.

DevOps Engineer — SoluLab, Ahmedabad (Remote) *Dec 2022 – Aug 2023*

- Built **GitHub Actions CI/CD** pipelines and Bash/Python automation scripts; deployed and maintained containerized applications on AWS and **Kubernetes** with distributed engineering teams.

PROJECTS

AI-Integrated Observability Platform — *Personal Project*

- Architected an end-to-end AI-powered observability platform (Flask → Logstash → Elasticsearch → Kibana) that autonomously triages production alerts using the **Anthropic API** — replacing manual log review with severity-based model routing (Haiku for medium, Sonnet for high/critical) for real-time, cost-optimized incident classification.
- Engineered a severity-aware deduplication engine with per-level cooldowns to eliminate alert fatigue, paired with automated **Jira** incident creation and email escalation — turning raw log noise into a fully tracked, prioritized incident response pipeline.

EDUCATION

Bachelor of Computer Applications — Rajiv Academy for Technology and Management, Mathura *Aug 2019 – Jun 2022*

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate | Docker Essentials: A Developer Introduction (IBM)
